

PRODUCT INFORMATION

ALGAECIDE

Green & Black Algaecide

For Swimming Pools

Kills and Prevents Blue-Green, Black, and Mustard Algae

Algae, while not harmful to bathers, does not belong in a properly operated swimming pool. A persistent algae growth is unsightly and places a significant load on the sanitizing and filtration systems. Algae growth can lead to unhealthy bathing conditions, cloudy water, and harbor bacteria growth. Green & Black Algaecide controls algae in your pool for up to three months.

ITS NEVER BEEN EASIER

- ✓ **One quart treats 20,000 gallons of pool water** – Add 16 ounces of this product per 10,000 gallons of pool water every three months to prevent algae growth. Add 32 ounces per 10,000 gallons for severe algae growth.
- ✓ **Reduces overall pool chemical treatment cost** – It can be costly attempting to keep a persistent algae growth under control with a pool's regular sanitizer. Green & Black Algaecide optimizes the sanitizing efficiency of your disinfectant system by killing existing algae growth and preventing future outbreaks.
- ✓ **Non-staining** – The copper in Green & Black Algaecide is securely bound in a triethanolamine complex, preventing staining when properly used.
- ✓ **Non-foaming** – Providing long lasting algae treatment for pools with attached spas.
- ✓ **Odor free and non-irritating** – At proper, EPA label recommended concentrations, bathers will never know Green & Black Algaecide is actively controlling algae while they enjoy their swim.
- ✓ **Ideal for spring start-up** – Over the winter, algae can lie dormant, just waiting to bloom in the warmth of spring. Green & Black Algaecide stops the dreaded spring algae bloom dead in its tracks, enabling a faster, less costly start-up.
- ✓ **Superior winterizing and vacation treatment** – Nothing insures a smooth spring start-up like the proper winterization of a pool. Make Green & Black Algaecide a regular part of the winterizing process and keep algae at bay all winter long. Also insures an algae free pool after that much needed two-week vacation.

DOSAGES

- **Every Three Months** – 16 fluid ounces per 10,000 gallons of pool water
- **Severe Algae Growth** – 32 fluid ounces per 10,000 gallons of pool water
- **Winterizing** - 16 fluid ounces per 10,000 gallons of pool water

USE DIRECTIONS

- Maintain pool water in the pH range of 7.2 to 7.8. Adjust pH to 7.2 when treating severe algae
- Ensure that the filtration system is working properly and that the filtration cycle is adequate.
- A regular brushing program will assist in the removal of stubborn algae.
- Determine the correct amount of product required for your pool.
- Add this product directly to the pool, distributing it over as wide an area as possible.
- While Green & Black Algaecide controls algae, it is important that adequate levels of sanitizer (chlorine or bromine) be maintained to control bacterial growth.

AVAILABILITY

Green & Black Algaecide is available in one quart bottles.
