

PRODUCT INFORMATION BALANCER

STABILIZER, WATER BALANCE AND CHLORINE NEUTRALIZER

CHLORINE STABILIZER – Cyanuric Acid

- ✓ Protects chlorine from the degrading effects of sunlight (UV).
- ✓ Reduces chlorine consumption and saves money.
- ✓ Essential for swimming pools utilizing gas chlorine, liquid chlorine (bleach), and calcium hypochlorite tablets or granular for chlorination.
- ✓ The cyanuric acid level should be maintained between 30 ppm and 85 ppm.
- ✓ 13.3 oz. of Chlorine Stabilizer per 10,000 gallons of water will raise cyanuric acid level 10 ppm.

AVAILABILITY

CHLORINE STABILIZER is available in 4, 25, 45, & 100 lb. pails; 2 lb. bottles; 5 & 10 lb. re-sealable bags.

pH PLUS – Sodium Carbonate

- ✓ Low pH (below 7.0) can cause surface corrosion and plaster etching.
- ✓ pH PLUS raises the pH of pool water efficiently and economically.
- ✓ Fast dissolving, granular soda ash.

AVAILABILITY

pH PLUS is available in 5, 10, & 25 lb. pails; 6 & 12 lb. re-sealable bags.

pH MINUS – Sodium Bisulfate

- ✓ High pH (above 7.8) causes scaling, calcium deposition and cloudy water.
- ✓ Fast dissolving granular pool acid lowers the pH and alkalinity of pool water.
- ✓ Safer to handle than muriatic acid.
- ✓ 2.5 lbs. of pH MINUS is equivalent to 1 quart of muriatic acid

AVAILABILITY

pH MINUS is available in 6, 12 & 30 lb. pails; 6 & 12 lb. re-sealable bags.

CALCIUM HARDNESS INCREASER – Calcium Chloride

- ✓ Low water hardness could stain or etch the pool surface and corrode equipment.
- ✓ Calcium Hardness Increaser raises water hardness level.
- ✓ Prevents foaming and equipment corrosion.
- ✓ 6 pounds of Calcium Hardness Increaser per 10,000 gallons of water will raise calcium hardness level by 50 ppm.

AVAILABILITY

CALCIUM HARDNESS INCREASER is available in 4, 8 & 25 lb. pails; 5 & 10 lb. re-sealable bags.

ALKALINITY INCREASER – Sodium Bicarbonate

- ✓ Low total alkalinity may result in corrosion and pH bounce.
- ✓ Alkalinity Increaser raises Total Alkalinity and buffers the water against changes in pH.
- ✓ Total alkalinity should be maintained between 100 ppm and 150 ppm.
- ✓ Minor affect on pH.
- ✓ 1.5 pounds of Alkalinity Increaser per 10,000 gallons of water will raise alkalinity 10 ppm.

AVAILABILITY

ALKALINITY INCREASER is available in 5, 10 & 25 lb. pails; 6 & 12 lb. re-sealable bags.

CHLORINE NEUTRALIZER – Sodium Thiosulfate

- ✓ High levels of chlorine (> 3 ppm) can make the pool unsafe for swimmers.
- ✓ Chlorine neutralizer lowers excessively high chlorine levels that may occur after superchlorination or inadvertent addition of too much chlorine.
- ✓ 2.0 oz of Chlorine Neutralizer per 10,000 gallons of water will reduce chlorine level by 1 ppm.
- ✓ 100% sodium thiosulfate crystals.

AVAILABILITY

CHLORINE NEUTRALIZER is available in 5, 25 & 50 lb. pails.
