

Defoamer

Emulsion Antifoam for Pools and Spas

Eliminates and prevents foam formation

Body oils, soap, shampoo and other residues in pools and spas, typically cause foam. It can also be caused by the use of certain algaecides or even soft water. **Defoamer** has been formulated specifically for eliminating foam in pool and spa water without altering the water chemistry or imposing any adverse effects upon the water or swimmers. The unique formulation of this antifoam is designed to rapidly disperse throughout the body of water treated, to promptly eliminate existing foam and remain as a residual in the pool or spa to prevent subsequent foam formation for an extended period of time. Therefore, it acts both as a defoamer and antifoam.

BENEFITS

- ✓ Fast acting – Rapidly reduces foam in pools & spas
- ✓ Long lasting – Excellent stability in pool and spas
- ✓ No need to alter pool chemistry – Effective over a wide pH range
- ✓ Easily dispersed when added to a body of water.
- ✓ Excellent stability at spa water temperatures.
- ✓ Provides excellent foam knockdown and suppression – The emulsion creates a weakness in the wall of the foam bubble, causing it to collapse, thereby eliminating foam and preventing further foam formation.
- ✓ Protected from bacterial growth in the product.

DIRECTIONS FOR USE

- Add one capful (approximately 1 oz.) of **Defoamer** per 500 gallons of water to prevent or eliminate foam build-up, with spa in operation. Do not overdose. If foam has not subsided after a ten-minute wait, repeat treatment.

AVAILABILITY

Defoamer is available in 1 quart bottles and 1 gallon jugs.
